

# Transform your company with high-velocity service management

With the rise of digital business and distributed teams, traditional norms of team structure and ways of working are being challenged. Modern operations, support, and business teams now must come together to deliver great digital service experiences. Yet, traditional service management is full of rigid systems and processes that prevent the cross-team collaboration needed for modern enterprises.

Organizations need “autonomy with alignment” – a balance between running fast and working the way they want while maintaining visibility and connection to the teams around them.

**Jira Service Management** puts all service teams together on the same platform, accelerating the flow of work between Development and IT Operations while empowering business teams to adopt a service-oriented mindset and deliver exceptional experiences for employees and customers.

## **DELIVER VALUE FAST**

Instead of complex and costly to deploy tools, Jira Service Management enables organizations to get started fast and scale with a shorter implementation schedule, transparent pricing, and a powerful yet easy-to-use platform.

## **ACCELERATE DEVELOPMENT AND OPERATIONS**

Traditional service management tools reinforce siloes between teams. Jira Service Management unites Development and IT Operations teams on a single platform, enabling collaboration, visibility, and flow of the work.

## **EMPOWER ALL SERVICE TEAMS**

Traditional tools make it difficult and costly for teams outside of IT to deliver service with urgency and speed. With Jira Service Management, easily extend service management to all teams with intuitive workflows and the ability to work autonomously.

We chose Jira Service Management to deliver a future-proof service management experience we can grow with.

# Unlocking high-velocity teams

Jira Service Management is Atlassian's IT Service Management (ITSM) solution. Built on the same foundation as Jira Software, it addresses core ITIL use cases, as well as business-centric use cases, known as Enterprise Service Management (ESM). Teams use Jira Service Management to centralize and respond to service requests, respond to incidents, streamline changes, collect and maintain knowledge, manage assets and configuration items, and more.

Unlike traditional service management solutions, Jira Service Management connects teams across Development, IT Operations, and the broader business on a single platform. In doing so, Jira Service Management unlocks high-velocity teams by accelerating the flow of work, providing faster time to value, and enabling agility and collaboration to respond to changes and deliver great service experiences.
