

OneStream® SensibleAI™ Studio

Solution Overview

OneStream's SensibleAI Studio offers a broad range of artificial intelligence (AI) capabilities. With SensibleAI Studio, users can execute those capabilities in-solution or embed them in other OneStream solutions, processes, and customizable user interfaces.

The SensibleAI Studio library of AI Routines spans from quantitative machine learning techniques to generative AI.

Value Proposition

SensibleAI Studio is the essential backbone for embedding advanced AI capabilities into the OneStream ecosystem, meeting the rapidly growing demand for AI-driven business processes.

With SensibleAI Studio, developers, consultants, partners, and customers can seamlessly integrate AI into new and existing workflows and innovate with confidence. The combined integration and innovation help organizations remain at the forefront of AI and business process advancements.

Enabling the Ecosystem

End Users — Enhance Business Processes with AI

- With SensibleAI Studio, organizations can leverage AI to optimize existing workflows and improve operational efficiency.
 - ④ AI-Powered Account Reconciliations: Reduce cycle time and mitigate errors and/or fraud throughout the account reconciliations cycle.
 - ④ AI Time-Series Anomaly Detection: Find anomalies in financial and transactional data. Cleanse and report on anomalies to improve operational efficiency.
 - ④ AI Commentary Summarization: Save time with hierarchical commentary summarization. Ask questions around flux/variance within the OneStream financial model.

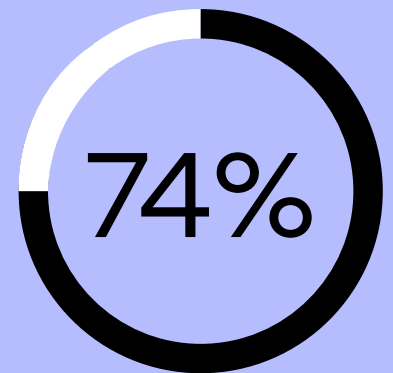

Power Users — Increase Productivity

- SensibleAI Studio accelerates implementation times, enabling organizations to get into production faster with AI productivity tools. Those tools enable data analysis using natural language and automated scanning of applications to optimize performance.
- This optimization results in a more efficient deployment process, **saving time and reducing costs.**

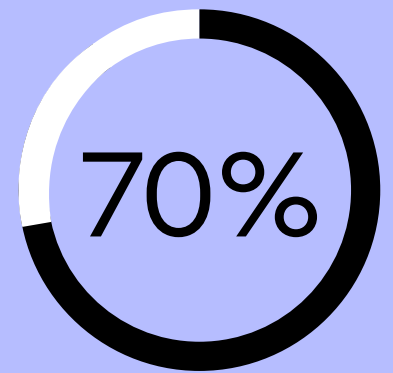

Creators — Build Business Processes with AI

- SensibleAI Studio empowers OneStream creators to build AI capabilities within specific business workflows using AI Genesis Blocks and AI Routines.
- This flexibility enables teams to enhance their solutions with minimal coding and create tailored solutions.

DID YOU KNOW

of CFOs believe that, by 2035, AI and automation will have completely reshaped organizations' finance functions.

of CEOs and 68% of CFOs believe the organizations that fail to invest now in tech, infrastructure, and skills will not survive the next five years.

OneStream® SensibleAI™ Studio

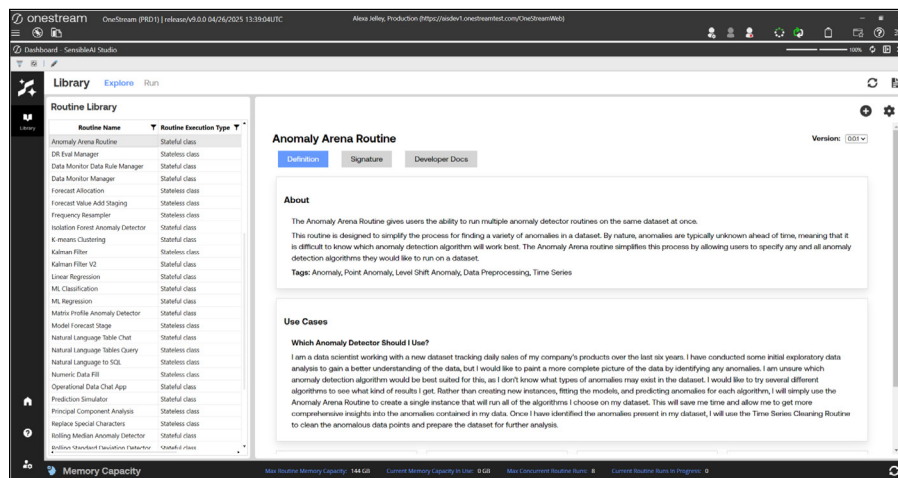

Key Capabilities

SensibleAI Studio offers an extensive library of AI Routines:

- Sophisticated machine learning (ML) modeling (classification, regression, clustering)
- Data transformation and analyzers
- Data cleansing
- Natural language to SQL generation
- Anomaly detection
- Report generation

AI Genesis Blocks:

- AI Genesis Blocks enable native interaction with any SensibleAI Studio Routines through a low-code/no-code plug-and-play architecture.
- Seamless integration of AI-driven Genesis Blocks — such as the AI Narrative Commentary Summarization Block — into existing business processes elevates decision-making and automation.
- OneStream creators are empowered to design and deploy custom AI Genesis Blocks, accelerating the development of tailored, AI-powered workflows without needing extensive technical expertise.

ARE YOU READY TO TRANSFORM YOUR FINANCE FUNCTION WITH AI?
