

Enterprise Entity Governance

AI-powered entity management

Built for global or complex organizations to manage sophisticated legal entity and subsidiary structures leveraging strategic workflows, integrations and automation technology to do more with less.

AI Virtual Assistant

Make information on the corporate record more accessible with an AI-powered virtual assistant. Help every user across the business access key information faster with pre-defined prompts or custom, human language questions.

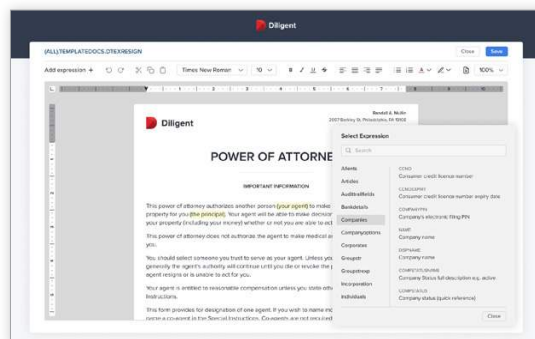

Group Structure Visualization

Generate real-time, customized group structure charts with AI. Leverage conditional formatting with different shapes and colors to easily review your current structure hierarchy and model scenarios to understand the impact of M&A, corporate simplification and spin-offs.

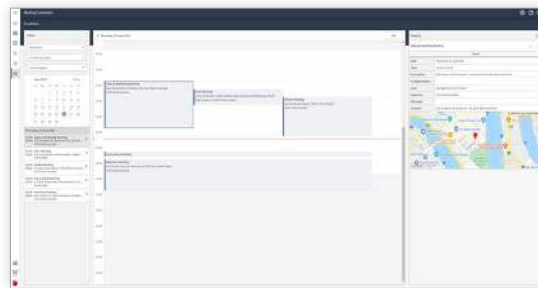

Document assembly

Many changes to entities require legal documentation of the occurrence, scope and effective date often following the same, or similar, formatting. Simplify this process with document templates and document assembly within Diligent Entities to automatically generate properly formatted evidence at scale as part of your event workflows to automate these repetitive tasks.

Meeting planner

Manage all global entity and subsidiary board and committee meetings in a single location. View and report on all scheduled and past meetings, set (and template) meeting agendas and view status of pre-meeting duties. With this single source of truth, corporate secretary teams can avoid scheduling conflicts, maintain version control and provide evidence of agenda topics without hunting through email and other systems.

Streamlined & secure entity management

Orchestrate a comprehensive system of entity governance oversight with bespoke workflows, greater access to data and process automation for many manual and repetitive tasks so your team can devote their efforts to building business value rather than fixing compliance issues.
